

Project Manager in Startup (Biotechnology Devices)

Full time from immediate, Erlangen (Germany)

Interherence is a young high-tech startup that develops, manufactures, and sells game-changing products in the field of optical biotechnologies. We combine integrated and classical optics with modern methods of nanofabrication to bring ease of use and reproducibility to light microscopy. In this role, you will lead the launch of new products and drive sales of existing products, with a particular focus on biomedical, biophysical, and pharmaceutical researchers as key customer groups. As an integral member of our fast-growing team, your position will be fundamental to the market success of our company. At Interherence, you can expect an interesting and dynamic environment, working closely with colleagues of ten different nationalities and diverse scientific backgrounds. As our Project Manager, you will play a crucial role in bridging hardware development, software development, applications, and senior management.

Responsibilities:

- Lead and oversee projects, ensuring their successful execution from inception to delivery.
- Act as a liaison between the hardware, software, and applications teams, fostering effective collaboration and communication.
- Coordinate with senior management to align project goals with the company's strategic objectives.
- Facilitate external collaborations with leading research groups, leveraging their expertise to enhance our product development.
- Support business development efforts by identifying new opportunities, nurturing partnerships, and exploring potential markets.
- Drive project planning, resource allocation, and timeline management to ensure timely project completion.
- Monitor project progress, identify and mitigate risks, and proactively address any issues that may arise.
- Foster a positive team culture, promoting collaboration, innovation, and continuous improvement.

Requirements:

- Proven experience as a Project Manager in a tech startup or similar environment.
- Strong background in both hardware and software development, enabling effective coordination and understanding between teams.
- Excellent leadership and communication skills to engage and align cross-functional teams.
- Ability to manage multiple projects simultaneously while maintaining a high level of organization and attention to detail.
- Experience in coordinating external projects with research groups or academic institutions is highly desirable.
- Business acumen and a strategic mindset to identify growth opportunities and contribute to business development efforts.
- Familiarity with the biotechnology industry and a passion for driving innovation in the field.

Join our dynamic and talented team, where you will have the opportunity to work on cutting-edge biotechnology devices and make a meaningful impact. If you thrive in a fast-paced, collaborative environment and are eager to bridge diverse disciplines while driving business growth, we look forward to receiving your application by mail:
